Bath Insights Internship Programme Project Brief

Project title: Digital Data and Technology Data Internship

Department: Digital Data and Technology

Project theme: Data

Capabilities: Data literacy; Critical thinking; Communication; Digital and AI literacy

Project brief: As part of the University's ongoing Digital Transformation and forthcoming AI Strategy implementation activities, the Enterprise Data team is seeking two interns to undertake an exploratory project focused on Digital, Data and AI literacy.

The internship will provide an opportunity for students to gain practical experience using AI tools such as Microsoft Copilot and AWS Quick, while contributing to the development of playbooks and guides that may inform future staff development initiatives.

The project will provide the University with an initial set of prototype resources and recommendations that can be used to inform future Digital, Data and AI literacy programmes, while giving participating students valuable hands-on experience of AI-enabled ways of working and core data management concepts.

Main outputs or deliverables:

- AI Literacy pack
- AWS Quick exploration report
- AWS Quick adoption playbook
