How to find out your computer name in XP

1. Click on the Windows Start button and then select Control Panel
Find your computer name  

2. Double click on the **System** icon
3. Select **Computer Name** tab and you will see the title **Full computer name** (please note the first part of the computer name has been blacked out)

![System Properties dialog box showing Computer Name tab with details of full computer name and domain](image)

- **Computer description**: Windows uses the following information to identify your computer on the network.
- **Full computer name**: [Blacked out] campus.bath.ac.uk
- **Domain**: campus.bath.ac.uk

To use the Network Identification Wizard to join a domain and create a local user account, click **Network ID**.

To rename this computer or join a domain, click **Change**.

**Note**: Only Administrators can change the identification of this computer.
