

Centre for Research in Education and the Environment

Our Purpose

“through research and scholarship, to contribute to and promote practical and theoretical understandings of how education in its widest sense can be focused on environmental and sustainability issues”

Director: **William Scott**
Email: cree@bath.ac.uk

Key Areas of Research

Supporting Postgraduate Study

- PhD, EdD and MPhil degrees
- MRes and MA degrees
- PGCE environmental science
- Teacher professional development
- School development programmes

Our Research and Scholarship

Explores the possibilities for education for sustainability, and the implications of these for liberal societies in general and for formal and informal educational provision.

Conceptualises the idea and role of learning in the management of environmental and social change.

Develops robust critical, theory-grounded understandings of education for sustainability and global citizenship.

Challenges the instrumental use of education, arguing that sustainable development is most usefully viewed as inherently a social learning process.
