# WHILE YOU WERE AWAY: New digital spaces

In August our new and improved subject guides, referencing and research services pages Libguides were launched.

Libguides is a product specifically designed to allow Librarians to create their own websites.

Libguides ensures mobile accessibility. Furthermore, not only does it showcase resources and facilitate ease of use, this platform will help enhance our e-learning provision in various file formats.

## Library Lists

Last year we piloted our new reading list management software with the Faculty of Science and Faculty of Engineering & Design. These new Library Lists provide live information from our catalogue on availability of books in print and links to full-text online. We are now updating the content in these lists with the help of academic staff, further promoting their use, and exploring how they may be used in other departments.

We are now in the process of enabling seamless delivery with Moodle implementation via LTI. This supports Curriculum Transformation with easy to edit lists and list managers. It also helps us to store and provide scanned content using our CLA license and generates data to improve Library processes such as targeted book ordering.
