

The East Building level 1 foyer is a busy thoroughway for the Lecture Theatre and other areas. It can be used for displays, but this must be done with care to keep pedestrian routes clear of obstructions and trip hazards.

All of exit doors and both flights of stairs from the Lecture Theatre must be kept clear of obstructions and trip hazards both during the event and when setting up.

The lift must be kept clear of obstructions and trip hazards both during the event and when setting up.

There must be clear and unobstructed pedestrian routes across the foyer both during the event and when setting up.

All of the main entrance doors must be kept clear of obstructions and trip hazards both during the event and when setting up.

The doors to the other parts of the building and the fire panel must be kept clear of obstructions and trip hazards both during the event and when setting up.

This is one possible solution that meets all the restrictions. Other solutions may be possible, especially if the Lecture Theatre is to remain empty during the set up, running and dismantling of the event—contact Health Safety & Environment if you want to discuss alternative arrangements.
