Bath Insights Internship – Digital Learning & Research Community Support

Department: Doctoral College
Theme: Student support (Resource review, mapping services, feedback collection)

About the role:

The Doctoral Development Team in the Doctoral College is responsible for the training and development of doctoral researchers, as well as providing events and activities that can help doctoral students feel part of a better research community.

We are looking for an intern to help us enhance our digital resources that support our training programme. We have a platform called MyDoctoralDevelopment and we are looking for an intern to help us improve the layout of our digital resources, create better learning pathways, and ultimately better promote what is available.

Since you'll be in the heart of Research Culture Month, you'll also have the opportunity to attend and support key doctoral events where we hope you will be able to engage with researchers and promote the digital content you have been working on.

Someone who has an interest in digital learning, is good at learning new systems, as well as being approachable and friendly would be our ideal candidate.

What you'll do:

- Review and improve the structure and layout of digital resources on MyDoctoralDevelopment
- Create clear and engaging learning pathways to help doctoral researchers navigate training opportunities
- Promote digital content during Research Culture Month by attending and supporting key doctoral events
- Engage with researchers to raise awareness of available resources and gather feedback

Why this matters:

Your work will help doctoral students access training and development opportunities more easily, strengthening research culture and community engagement.

Skills you'll develop:

- Digital learning design and content organisation
- User experience and accessibility awareness
- Communication and engagement with academic audiences
- Event support and promotional skills

Ideal for students who:

- are interested in digital learning and resource design
- enjoy learning new systems and improving user experience
- are approachable, friendly, and keen to engage with the research community
