General Information						
Title	MEng in Computer Systems Engineering (2010/11 entry onwards) MEng in Computers, Electronics and					
Awarding Institution	University of Bath					
Teaching Institution	University of Bath					
Programme Accredited by	IET (2013)					
Collaborative Provision Type	Not Applicable <input type="checkbox"/>					
Placement Available?	Yes <input checked="" type="checkbox"/>					
Study Abroad Available?	No <input checked="" type="checkbox"/>					
Subject Benchmark Statement(s) Click here to see 'QAA List'	Engineering: http://www.qaa.ac.uk/en/Publications/Documents/SBS-engineering-15.pdf					
Programme Approved by	Senate 1996					
Aims	Learning Outcomes	Assessment	Placement/Prof Acc	Admissions/Support	Show All	Close
Aims; "What is the purpose of this programme of study? What is the programme intended to achieve?"						
Synopsis and Coherence	<p>Synopsis</p> <p>The first two years provide a core foundation curriculum with the 120 credits taken coming from units in the following subject areas: mathematics; electromagnetics and physics; digital electronics; analogue circuits and devices; signal processing and communications; computer programming; electronic design and manufacturing; electrical systems, control and power electronics. The remaining credits cover transferrable skills and professional engineering practice.</p> <p>The third year may be spent on a period of supervised industrial training.</p> <p>The penultimate year includes as core 12 credits with particular relevance to computers, electronics and communications. Optional semester 1 topics cover many other aspects of computers, communications and electronics. The 2nd semester is dedicated to the Group Design & Business Project which includes material on project management, finance and the role of the engineer that is regarded as essential for the modern entrepreneurial engineer.</p> <p>In the final year students take 18 credits of core material are free to choose a further 2 units in the 1st semester, from an extensive list of Masters level topics, which are relevant to the subject of computers, electronics and communications. An individual project occupied the entire 2nd Semester for which the selection of a topic in the area of computers, electronics and communications will be encouraged. This project will contribute 30 credits to the programme.</p> <p>Academic Coherence</p> <p>The combined study of computer systems, electronic and communications technologies is intended to produce a programme for students who wish to specialize in the areas of computer systems, information networks and software design.</p> <p>The programme is reasonably broadly based in the first two years in order to lay the foundations of the common electronic, electrical and computer principles and to give students a view of other important areas of electronic and electrical engineering. This latter point is important because it is generally recognised that students' interests change and develop whilst at university and they may wish to move to another field at a later date.</p> <p>The final two years provide sufficient scope for students to study topics that are of particular interest to them in the general area of computer systems, electronics and communications. Group and individual project work provides opportunities to apply the lecture material to the solution of practical problems and to introduce the elements of management of an engineering enterprise. Both the managerial and business aspects of the engineer's role are developed in the Group Business & Design Project.</p> <p>This MEng degree is accredited by the IET as satisfying the educational requirements for Chartered Engineer Status.</p>					

<p>Educational Aims of the Programme</p>	<p>Aims</p> <ul style="list-style-type: none"> • To enable students to pursue professional careers in computer systems engineering at a level which requires the exercise of sound judgement, personal responsibility and initiative, and the ability to make engineering decisions. • To equip students with a detailed understanding of the principles of computer systems and electronic engineering science, many aspects of which will be at, or informed by, the current boundaries of the discipline. • To equip students with skills to systematically employ engineering principles to produce original analyses of, and solutions to, engineering problems. • To provide an in-depth understanding of the components and operation of modern computer systems. • To enable students to work successfully in engineering teams. <p>Objectives</p> <p>It is expected that graduates of this programme will meet the educational requirements for the award of a MEng degree. It is intended that all graduates will satisfy the AHEP (third edition) Learning Outcomes for Integrated Masters (MEng) Degrees and will have experienced a wide range of delivery and assessment strategies. As such they will have exposure to developing technologies, and key drivers for business success. The students would be able to demonstrate their ability to apply fundamental knowledge to generate innovative and commercially viable product designs.</p> <p>To this end the objectives of the programme will be to prepare graduates to:</p> <ul style="list-style-type: none"> • use their knowledge and understanding of computer systems, electronics and communications to optimise the application of existing and emerging technologies, in both familiar and unfamiliar situations, and in the creation of new designs; • apply theoretical and practical methods in a creative way to the analysis and solution of problems; • provide technical leadership; • use effective communication and interpersonal skills; • operate within the appropriate code of professional conduct, recognising obligations to society, the profession and the environment.
<p>Learning Outcomes; including teaching, learning and assessment methods, specifying those applicable for interim awards where appropriate. Indicate what successful students should be able to do, how well they should be able to do it and the context or conditions in which they should be able to do it. See also FHEQ and SEEC guidance.</p>	
<p>Knowledge and Understanding</p>	<p>Students should be able to demonstrate:</p> <ul style="list-style-type: none"> • systematic, detailed and critical understanding of electrical and electronic science, ranging from the well-established principles to new techniques, many of which are informed by the current boundaries of the discipline; • detailed knowledge of a number of the practical technologies currently used in computer systems and electronic engineering; • critical understanding of the uncertainty, ambiguity and limits of their knowledge, and how these may affect analyses of, and solutions to, engineering problems; • awareness of the commercial and financial constraints that engineers may have to work under. <p>Teaching and learning is through lectures, tutorials, students' own reading, practical exercises and laboratory work.</p> <p>Assessment is by a combination of written examination, written course work and oral presentation.</p>
<p>Intellectual Skills</p>	<p>Students should be able to demonstrate:</p> <ul style="list-style-type: none"> • ability to apply the concepts and principles of electrical and electronic engineering science to the solution of engineering problems in both familiar and in complex and unpredictable professional environments; • ability to critically evaluate information in the form of arguments, assumptions and/or technical data (that may or may not be complete) in order to be able to produce solutions to problems in computer systems, electronic and communication engineering that may be either of a routine nature or require the development of new and original techniques. <p>Teaching and learning is through lectures, tutorials, students' own reading, practical exercises and laboratory work.</p> <p>Assessment is by a combination of written examination, written course work and oral presentation.</p>
<p>Professional Practice Skills</p>	<p>Students should be able to demonstrate:</p> <ul style="list-style-type: none"> • employ a range of established and new techniques to review and critically analyse information concerning engineering problems, and to propose and implement solutions in a professional manner; • deal with complex engineering issues, both systematically and creatively, make sound judgements in the absence of complete data, and communicate their conclusions clearly to both specialist and non-specialist audiences; • undertake further continuing professional development and the development of new and advanced skills that will enable them to assume a high level of responsibility within an engineering organisation. <p>Teaching and learning is through lectures, tutorials, students' own reading, practical exercises and laboratory work.</p> <p>Assessment is by a combination of written examination, written course work and oral presentation.</p>
<p>Transferable/Key Skills</p>	

	<p>Students should be able to demonstrate:</p> <ul style="list-style-type: none"> • ability to use IT to collect, analyse and present technical information; • ability to use appropriate professional simulation and design tools; • the exercise of initiative and personal responsibility; • ability to effectively present technical information in both written and spoken form; • independent learning ability required for continuing professional development; • how to plan and execute a project; • an ability to work in a team. <p>Teaching and learning is through lectures, tutorials, students' own reading, practical exercises and laboratory work.</p> <p>Assessment is by a combination of written examination, written course work and oral presentation.</p>

Assessment Methods

Summary of Assessment Regulations	NFA - fully compliant <input type="checkbox"/>
<p>Progression Regulations and Awards</p> <p><i>For programmes fully compliant with NFA refer to the relevant appendices of the relevant NFAAR document (UG, PGI, FD, HY, or CPD)</i></p> <p><i>Note any significant features relevant to the "Assessment in the programme context" sections of the relevant NFAAR document.</i></p> <p><i>Set out any approved exemptions from NFA.</i></p> <p><i>Set out progression and assessment regulations where these do not comply with NFA.</i></p>	<p>The rules for progression from one stage to another and grading of assessed work and examinations conform to the University's framework for assessment and assessment regulations (NFAAR), see http://www.bath.ac.uk/registry/nfa/nfaar-ug.pdf</p>

Students leaving an undergraduate programme prematurely may be eligible for a [Certificate of Higher Education](#) or a [Diploma of Higher Education](#).

Placement and Professional Accreditation

Details of Work Placements Requirements / Work Based Learning / Industrial Training Requirements	Students on the sandwich programme will undertake a placement of at least thirty weeks during the third year which would be assessed on a pass/fail basis and be accredited 60 credits. Assessment will be via a 3000-4000 word report on the Placement.
Details of Study Abroad Requirements	
Details of Professional Accreditation	

Admissions and Support

<p>Admissions Criteria including APL/APEL arrangements</p> <p><i>Only refer to APL, APEL or direct entry with advanced standing if regular use is likely to be made or is not possible.</i></p>	<p>Normally an AAA grade profile, or equivalent, at GCE A level will be required, including mathematics to GCE A level standard, a further scientific/numeric subject to GCE A level, and a third GCE A level with at least a grade A. A GCE A level pass in Physics is preferred, although other appropriate subjects, for example electronics, are also acceptable.</p> <p>Admissions criteria can be found by following the link below: http://www.bath.ac.uk/study/ug/prospectus/subject/electrical-electronic-engineering/entry-requirements/</p>
<p>Details of Support Available to Students</p> <p>[link to Ac Reg quality page]</p>	

**Department and Programme
Specific Support Information**

*e.g. induction programmes, any
peer mentoring schemes, regular
department events*

Additional information about Electronic and Electrical Engineering is available at the Department's
webpage: <http://www.bath.ac.uk/elec-eng/>
