

UNIVERSITY OF
BATH

Natural Sciences Degrees **Choices and Options**

Subject Choices for the Natural Sciences

The Natural Sciences degrees are built around a set of **subject streams** for both the BSc and MSci courses. The subject streams are built from a string of **subject blocks** that progress through the years of the course. Each subject block is composed of a number of **units** taught at the University. The details of the units and blocks are given in the BSc and MSci flowcharts <https://www.bath.ac.uk/publications/natural-sciences-course-selection-guide/>.

The BSc and MSci degrees are built as collations of subject streams. Each collation has a **major science subject** which is ultimately the primary focus of study, and a **minor science stream**. Your major subject is the subject in which you ultimately perform your final year research project and that final year choice is enabled by double blocks of units in earlier years.

All permitted collations for year one enable two or three possible major subjects for later years. Your course can adapt to your developing interest and abilities in the Natural Sciences subjects. The units and the collations are on the University catalogue: <https://www.bath.ac.uk/catalogues/2021-2022/s/s-proglist-ug.html>.

The MSci and BSc subject streams and collations are identical for years one and two, but diverge after that. There is no advantage in starting on either MSci or BSc, and with suitable examination results you can switch between them, **except for BSc only** collations, which cannot be taken to the masters level.

Note these collations are not prescribed named degrees like *Physics with Astrophysics* that enforce a single path through the course. You may switch between collations as you wish if your block choices allow it, e.g. it is trivial in years one and two to swap from *Chemistry major with Physics* to *Physics major with Chemistry*. First year blocks are the foundation to your course; example - taking the single block of pharmacology in year 1 of the *Biochemistry with Chemistry* collation can lead to majoring in Pharmacology later in the course.

Your selection of blocks in Year 1 and Year 2 must be drawn from a selection available in one of these named collations.

MASTER'S OR BSc COLLATIONS:

Biochemistry major with Chemistry and Molecular Biology	MSci	BSc
Biochemistry major with Pharmacology	MSci	BSc
Biology major with Chemistry	MSci	BSc
Biology major with Pharmacology	MSci	BSc
Biology major with Physics	MSci	BSc
Chemistry major with Biochemistry	MSci	BSc
Chemistry major with Biology	MSci	BSc
Chemistry major with Pharmacology	MSci	BSc
Chemistry major with Physics	MSci	BSc
Physics major with Biology	MSci	BSc
Physics major with Chemistry	MSci	BSc

BSc ONLY COLLATIONS:

Biochemistry major with Environmental Science	BSc
Biology major with Environmental Science	BSc
Chemistry major with Environmental Science	BSc
Environmental Science major with Biochemistry	BSc
Environmental Science major with Biology	BSc
Environmental Science major with Chemistry	BSc
Environmental Science major with Physics	BSc
Pharmacology major with Biochemistry	BSc
Pharmacology major with Biology	BSc
Pharmacology major with Chemistry	BSc
Physics major with Environmental Science	BSc

THE ACADEMIC YEAR

Each academic year consists of two 15 week semesters each of which will normally have 11 weeks of teaching and then revision and exams on that semester. In each year you have to take 60 credits of material, which is usually 5 blocks such as the biology block B2.1 or the chemistry block C1.3 (although some final year projects are 18 or 24 credits as they are significant pieces of work). Each block is composed of units from the contributing department, often with a choice, so for example B3.1 takes *BB30208 Evolutionary quantitative genetics* and a choice of *BB30131 Evolution in deep time* and *BB30132 Sexual conflict*.

PRE-REQUISITES

One of the keys to understanding the Bath Natural Sciences course is the idea of **pre-requisites**. In order to progress in most subjects, you have to show you have some required prior knowledge. That could be taking particular A Levels, or for example passing a year two biology course to get onto a 3rd year project. The pre-requisites ensure that you will get **depth** to match the **breadth** of the course. Some non-science courses have no pre-requisites – this can be useful for trying new subjects and interests later in the course.

MAKEUP OF COLLATIONS

The major subject stream must consist of two **blocks** of units each year (with the exception of Environmental Sciences), and a final year project or dissertation. The remaining three blocks of each year are taken up by minor science strands and choices of science and non-science units. Once blocks are chosen in year one, they set up **requisites** for further study that may constrain which blocks can be chosen in subsequent years.

Major and minor first year blocks				
Major/minor block name	First year blocks	Requires	Forbidden with	A Level requirements
Biochemistry	Bc1.1	LS1.1	Physics, some Biology	Chemistry; Biology preferred
Biology	B1.1	LS1.1	Biochemistry	Biology
Chemistry	C1.1, C1.2, C1.3		Maximum two Chemistry blocks per year	Chemistry
Pharmacology	Pc1.1	LS1.1	Physics, Environmental Studies	Chemistry, Biology preferred
Physics	P1.1, P1.2	M1.1	Biochemistry, Pharmacology	Physics, Maths
Environmental Science	Begins Yr 2		Pharmacology	Chemistry

Once major and minor streams have been chosen, there will *usually* be space for optional blocks (see details in collations). There are also some forbidden combinations that have been introduced to aid with the academic coherence of the permitted collations and with timetabling.

FLEXIBILITY

ALL final year blocks of the MSci have to be taken at master's level and within science, which reduces flexibility, but there is *usually* room for manoeuvre within the streams later in the course. Many streams have choices between units within them. In addition one of the minor science streams in the BSc final year can usually be replaced by an optional slot, for example to continue the third year of a non-science option.

The ZZ block, the [Director of Studies Approved Units](#), may allow the selection of units from other departments or the mixing of units between blocks.

See the examples at the end of the document.

Help with the detailed options

The following pages show the outlines of streams that should be the basis of your choices, along with the options available. They are colour coded as follows:

Mandatory Streams:

Organic Chemistry

You **HAVE** to take these.

Mandatory Choices:

Organic Chemistry

You **HAVE** to choose one or more.

Optional Choices:

Organic Chemistry

You can choose between several.

PRE-REQUISITES

The charts show how studying one block allows the study of a subsequent block, or conversely how a block requires blocks to be studied in a previous year by linking lines. So from this example,

Taking the block Ls1.1 enables B2.3 or B2.4 or B2.5 to be taken in year two. To take B3.5 in year 3, you must take B2.5 in year two and have taken Ls1.1 in year one.

HELP WITH MAKING YOUR CHOICES

The charts in the following pages show in detail the default make-up of the collations for BSc and MSci majors.

You can tweak these using the Natural Sciences Web Tool at www.bath.ac.uk/nat-sci/mycourse to experiment with other routes through the course. The tool shows you routes to final endpoints

Please note that a number of final year selections can branch from one first year selection of blocks. Experiment to find the best starting point for you.

See details of the teaching units making up the stream blocks on flowcharts at:

[BSc-2021-2-flowchart.pdf](#)

[MSci-2021-2-flowchart.pdf](#)

There may be rare occasions where due to unforeseen or unavoidable circumstances it becomes necessary to make significant changes to a course or to withdraw it or part of it (e.g. a particular unit/module). Visit: www.bath.ac.uk/study/ug/apply/admissions/changes-withdrawal

Please note: Education 1 is only available in Semester 2 for Year 1. If you would like to choose this option, you will need to select a Semester 1 option from a different stream; for example the Management stream or M1.2, Mathematics for the life sciences.

For more details on the University terms and conditions please click on the link below:

Examples of easy modifications

As shown above, in the final year of a BSc degree, a block of the minor science can be replaced with a block from the non-science options. Education or Management can always be selected for this block. Psychology can only be selected if it has already been studied in years 1 and 2.

- (i) Drop BSc Final Year Minor: *"I have decided I want to be a teacher"*

		Molecular biology B2.3	
	Maths for life sciences 1	Education 2	Education 3

Education can replace either Biology or Biochemistry in the final year as they are both minor subjects – only in the BSc.

(ii) Changing Major: *"I just love physics after all"*

This is quite a common dilemma for double-double choices, and it is a straightforward swap. You can change your declared major and minor when progressing to a new year of study. The courses below, with the same chemistry options selected, are identical in years 1 and 2

	Year One	Year Two	Year Three
Chemistry major with Physics	Two streams chosen		
	Inorganic chemistry C1.2	Inorganic chemistry C2.2	Inorganic chemistry C3.2
	Physical chemistry C1.3	Physical chemistry C2.3	Physical chemistry C3.3
	Mandatory		
			Chemistry project
	Physics P1.1	Physics P2.1	Physics P3.1
	Physics P1.2	Physics P2.2	Physics P3.2
	Maths for physics M1.1	Maths for physics M2.1	

	Year One	Year Two	Year Three
Physics Major with Chemistry	Mandatory		
	Physics P1.1	Physics P2.1	Physics P3.1
	Physics P1.2	Physics P2.2	Physics P3.2
			Physics project
	Maths for physics M1.1	Maths for physics M2.1	
	Two streams chosen		
	Inorganic chemistry C1.2	Inorganic chemistry C2.2	Inorganic chemistry C3.2
	Physical chemistry C1.3	Physical chemistry C2.3	Physical chemistry C3.3

The first year choice below starting in the Biology with Chemistry collation gives the option to major in Biology, Chemistry or Pharmacology in year two. It also has six different combinations of biology blocks possible within double biology. So, after choosing the right five blocks for year two, you could now be on the collation of Pharmacology major with Biology, and with Chemistry as the supporting subject.

	Year One	Year Two
Biology major with Chemistry	Cell & mol. biology Ls1.1	Genomics B2.4
		Molecular biology B2.3
		Development/Neuroscience B2.5
	Evolution & Ecology B1.1	Evolution & Ecology B2.1
	Organic chemistry C1.1	Organic chemistry C2.1
	Inorganic chemistry C1.2	Inorganic chemistry C2.2
	Physiology Pc1.1	Pharmacology Pc2.1
		Pharmacology Pc2.2

(iii) Director of Studies Approved Units

	Year One	Year Two	Year Three	Final Year
			BSc DoS Approved Units	MSci DoS Approved Units

Not shown fully in these collations are the Director of Studies Approved Units blocks that are normally available in year 3 of the BSc degrees, and year 4 of the MSci degrees. In some MSci collations there is also a year 3 Director of Studies Approved Units block.

These can be taken in place of the blocks named in the collations above, subject to timetabling, and can be built from other units from the Natural Sciences selection, units mixed between the usual block structures or units taken from other courses. These must follow certain technical requirements to preserve the overall validity of the degree to be awarded, you need the pre-requisite knowledge to study them, and selecting them needs approval from the Natural Sciences and the delivering department: hence – Director of Studies Approved Units.
